
Dude, Where Did My Work Go?

Matthew Sword

Introduction

About Me:

I'm from Columbus, Ohio which is the 15th largest city in the United States

I've been working in software development for 20+yrs.

I enjoy hiking, running, golfing and attempting to play guitar.

I love solving problems by building systems. Creative problem solver.

How many of us have lost our homework or code?

- Overwrote my work
- Out of storage
- People changing files
- Something broke

OOPS!

Pro Tip

This tool can save you many hours unnecessary **frustration.**

I'm referring to Version Control Systems, today we are using **Git**

1. Code Versioning Systems

What / Why: Track changes in work over time & helps recover from mistakes, work safely and collaborate with teams.

→ **History**

See what changed and return to earlier versions.

→ **Safety**

Work independently without breaking someone else's code.

→ **Collaboration**

Combine everyone's work into one shared project.

Activity:

Create your own GitHub account

GoTo: <https://github.com/>

Simulation

Git Commands - git help [everyday]

- **clone**
Copy repo to your computer
- **add**
Choose changes to add to next commit
- **commit**
Record changes in Git history
- **push**
Send commits to remote repo
- **pull**
Bring remote back to your computer

Git -h
Git <cmd> -h

Other Cmds

branch / switch -c -
List, create, or delete
branches

merge - Join two or
more development
histories together

init - Create an empty
Git repository

Exercise - Your turn.

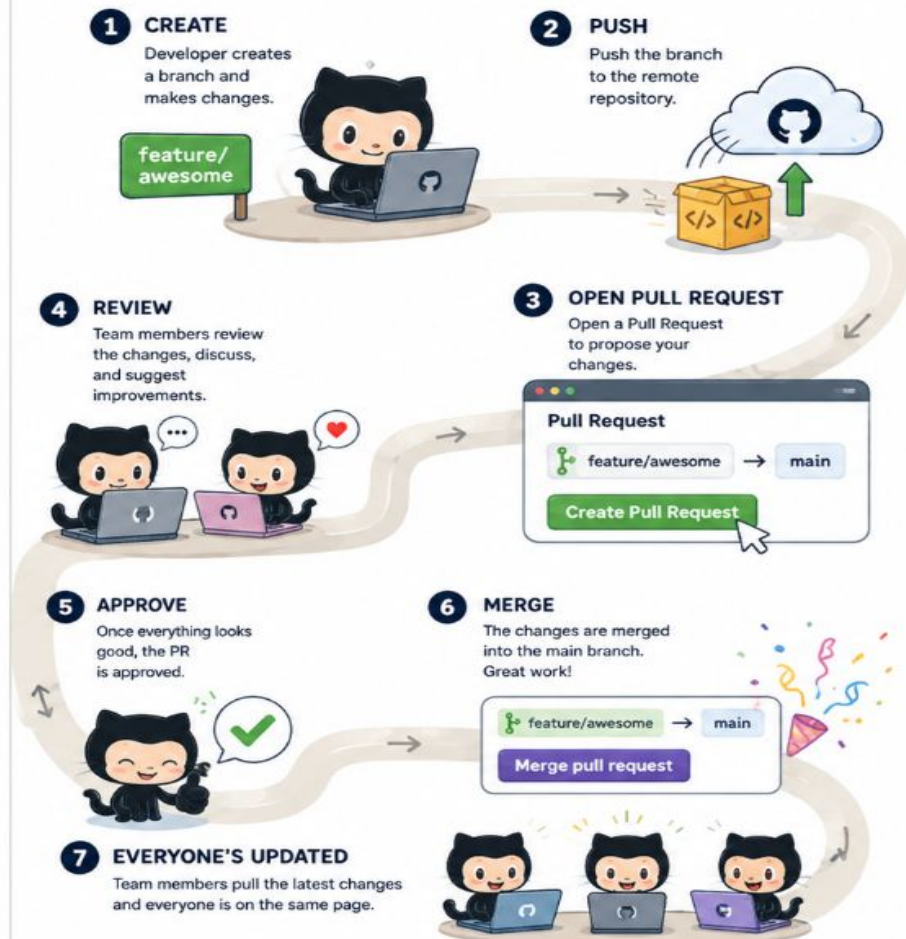

- Navigate to empty folder on your computer
- Open a terminal
 - `git clone https://github.com/msword/hola-devon.git`
- Create branch -
 - `git switch -c modules/<name>`
- Follow entity file instructions in modules folder
 - Add to the file
 - `git add <file>`
 - `git commit -m "Your comment here"`
 - `git push -u origin modules/<name>` (theoretical)

Now is the time we
combine our **Work as
a Team.**

Pull Request

A request to merge
code changes from
one branch to another

PULL REQUEST WORKFLOW
